

## Page Layout

Now that you have created your box models, lets work on creating a better layout with columns with your Cascading Style Sheets.

- 1) Open your XHTML page that includes your boxes done with Cascading Style Sheets.
- 2) Now, lets create a fake menu and implement a **Page Layout** with columns via our Cascading Style Sheet.
- 3) Within that **Page Layout** you also need to implement a background image.
- 4) Once completed, print out the browser screen and code to turn in as your **Page Layout** assignment.
